

Abstract:

The invention relates to the use of water-insoluble organopolysiloxane derivatives of the general formula (I)

5

in which the radicals

R^1 are alkyl radicals, preferably having 1 to 4 carbon atoms or aryl radicals, but at least 80% of
 10 the radicals R^1 are methyl radicals, and
 R^2 at least once in the molecule has the definition (a)

15 for defoaming aqueous media, especially printing inks and paints.
